

## **Version 4.2.5 Release Notes**

2014-03-31

### **Contents**

Introduction – 2
General – 2
Contacts – 2
Donations – 2
Grow Your Own (GYO) – 2
Reminders – 2
Website Integration – 2

## **Introduction**

This document describes features which were added to release 4.2.4 of Sumac to create release 4.2.5.

## **General**

There are command key shortcuts for some commands. The key to use is displayed beside the name of the command.

## **Contacts**

Contact last names and organization names sort differently: they ignore English, French, and Spanish articles (e.g. *the, a, les, los*, etc.) at the start of names. So *The Big Company* will be sorted by *Big* rather than by *The*.

## **Donations**

The Donor Roll report can be used with any relationship instead of just household membership. This lets you see groups of donations by companies, teams, or any other related groups.

## **Grow Your Own (GYO)**

Notifiers can trigger an email to be sent when a new GYO record is created.

## **Reminders**

Several changes to reminders enable them to be more automated. Steps can automatically send emails and move to the next appropriate step with the next appropriate user and date.

A reminder can be connected to an event. You can search for reminders by event or event group.

## **Website Integration**

New donations2 web pages are available.

You can have a link on your website which asks a user to fill in a form. This is useful for getting website users to fill in
