Version 4.4.18 Release Notes

2018-09-05

Contents

Introduction

This document describes the features added to release 4.4.17 of Sumac to create release 4.4.18.

Security

As a Sumac user, you are now able to reset your password from the log in window for the database. This is only available to non-administrative users.

General

In the upper corner of text fields, you can now see the total number of characters allowed in that field, as well as the number you have remaining.

When you export records with a preferred phone number or email for a contact, Sumac now gives you the option to include the type of preferred information. For example, if the preferred phone number is from the business tab, Sumac includes (business) beside the number.

Communications

When you set a notifier to be triggered by new communications, Sumac now includes information about Contact fields A and B as part of the notifier.

Course Registration

When you search by the Location field in the registrations list, you are now able to select a location from a drop down, rather than requiring text entry

Donations

When performing a mail merge from the donations list, you are now able to specify that Sumac groups the donations by household.

Fundful Integration

When you import donations from Fundful into Sumac, the individual fundraiser is now recorded in the soft credit field.
